

## ST MARY'S CALNE

### FIRST AID PROCEDURES

The school recognises that it has a duty to provide appropriate First Aid facilities, equipment and training, both as an employer under normal Health and Safety regulations and as a provider of education for pupils.

In addition to statutory or other requirements, the school recognises that it has a responsibility to endeavour to ensure the safety of pupils at all times, especially bearing in mind it is a full boarding school, and to provide adequately for visitors on the premises. As part of their induction, all new staff and pupils are informed where to go in the event of illness or injury.

During term time, the Health Centre is staffed by registered nurses or a highly trained first aider during the working day and cover throughout the night.

#### **Provision of Trained/Qualified Staff**

1. The Health and Safety Executive (HSE) advises that an employer should provide a minimum of one First Aider per 50 employees. The Education Service Advisory Committee recommends that there should be one First Aider for every 150 pupils and that a higher level of provision may be required in hazardous areas such as laboratories. Whilst not First Aiders, the nurses are all trained in Basic Life Support.
2. Outside term time there are fewer than 50 staff on the site so the cover will be provided by the trained members of the Support Staff and the Sports Centre staff. Details of those with First Aid qualifications are listed in Appendix A.
3. The DfE Guidance on First Aid for Schools states that 'First-aid provision must be available at all times while people are on school premises, and also off the premises whilst on school visits.' In school, the Health Centre acts as the main point of contact. Outside school, the trip leaders have a first aid kit and a minimum of Emergency Life Support training. At offsite sporting events, there is a Sports First Aid qualified member of staff present.
4. It is recognised that it is good to have more cover than the minimum requirement and therefore it is appropriate for a number of other staff (teaching and non-teaching) to be trained up to Emergency First Aid at Work. Details of those who are qualified to this level are listed in Appendix A.
5. It is important that all teachers possess some knowledge of First Aid and the aim is to achieve this by including it at least tri-annually as CPD.

#### **Training**

The school will offer a programme of First Aid training, at two levels, in a three-yearly cycle (taking into account that First Aid certificates need to be renewed every three years).

## **1. Outdoor First Aid Level 2**

Staff who take high risk residential trips i.e. Geography fieldtrips and Duke of Edinburgh expeditions take the 16 hour Outdoor First Aid Level 2 course in order to ensure that First Aid can be given in remote areas before medical back up arrives.

## **2. Emergency First Aid at Work**

This is a one day course and the school expects all Housemistresses, Deputy Housemistresses, Day Housemistresses and PE staff to have this level of First Aid Qualification. EFAW is also offered to support teams such as the Health Centre, Catering and Maintenance. The school hosts EFAW courses on site.

The Assistant to the Senior Staff keeps a copy of all First Aid certificates and creates a register of First Aid trained staff (see Appendix A). This is posted in the School Office, Staffroom Foyer and copies are provided to the Health Centre and Estates Bursar. Staff joining the school are asked to provide a copy of any First Aid certificates already held.

### **Chronic Condition Specific training**

Additionally, training is provided for appropriate staff on managing long term conditions of those in their care. Staff requiring this training is reviewed annually.

- Medication Awareness (Education)
- Schools: Children with Allergies / Anaphylaxis
- Schools: Children with Asthma
- Schools: Children with Diabetes
- Schools: Children with Epilepsy

These are available on TrainingSchoolz website.

## **Facilities and Equipment**

### **Health Centre**

The Health Centre is staffed during term time by a registered nurse. Maintained in the Health Centre are:

- One wheelchair
- Dressings/bandages of all types
- AED Defibrillator – to be kept in Reception
- Oxygen – in Health Centre for use by nurses only

### **Defibrillator**

A Defibrillator is kept on the side of the welcome desk in the main School Reception.

### **First Aid Kits**

The contents of First Aid kits are solely for the purpose of ensuring that the patient is protected, prior to receiving assessment and appropriate treatment from qualified staff and, if appropriate, the emergency services and/or the school doctor or nurse. The Health Centre has First Aid materials and supplies First Aid kits and contents to the Houses and departments as listed in Appendix B. First Aid kits are also to be taken on all trips out of school and to sports fixtures.

The list of what each First Aid kit should contain is at Appendix C, and locations are listed at Appendix B. The Health Centre staff will inspect and replenish First Aid kits at the beginning of each term. Thereafter, the Health Centre should be notified if any items are used.

### **Eye Wash Stations**

The Science Department, Art Department, Carpentry Workshop and all School Kitchens are provided with eye wash stations/facilities with appropriate instruction notices.

### **First Aider Protection - hygiene procedures to minimise the transmission of disease**

Having considered the added risk of possible transmission of diseases other than those normally found in this country, including diseases spread via bodily fluids (e.g. Hepatitis B, AIDS), all First Aid Kits are supplied containing:

1. Three pairs of disposable gloves
2. One personal shield, for use during CPR (Cardio Pulmonary Resuscitation)
3. One clinical waste bag (yellow) – **all clinical waste should be sent to the Health Centre for disposal.**

In order to ensure a safe environment and a high level of hygiene, spillages of body fluids should be cleared carefully, using the contents of the body fluid disposal packs. Body fluid disposal packs are located in: all Houses, the Health Centre, the Kitchen, the School Office and the Staff Room. They are available from the Health Centre for trips out of school. The correct procedure when using these kits is:

4. Put on disposable gloves.
5. Soak up the spill with the absorbent material provided.
6. Clear up material with disposable cloth.
7. Wash surface with disinfectant/ mediswabs provided.
8. Place all materials into the yellow contaminated waste bag, and secure the top.
9. Wash hands thoroughly with soap and water.
10. Take the yellow bag of contaminated waste to the Health Centre for disposal.

Red, degradable laundry bags, supplied by Housekeeping, are available to the Houses and the Health Centre for washing contaminated bedding. Houses and the Health Centre also have supplies of disposable gloves.

### **Specialist Requirements:**

Heads of Department are responsible for notifying the Health Centre of any special First Aid requirements that they may need for their particular department.

### **Procedures**

Should an accident or injury occur, the Accident Policy procedures (Appendix D) must be followed. Members of staff should conduct appropriate emergency First Aid depending on the injury or condition of the casualty, and their own training, qualifications and experience. Should assistance be required, the member of staff involved should send someone to call the Health Centre on 230 (07817 929490) immediately to get help and stay with the casualty until that help arrives. If the casualty is: unresponsive, unconscious, bleeding severely, badly burned, suffering head/neck/back injuries after a major trauma then follow the guidance in the Accident Policy (Appendix D) which is to not leave the casualty unattended unless this is the only way to get help. If using the school telephone system dial 9 for an outside line then ring 999 for an ambulance and direct it to the main entrance, postcode SN11 0DF i.e. white posts and chains, then immediately inform the Health Centre. It is not legally necessary for a First Aider to be present to assist with dressing an injury. However, the casualty may prefer (or

actually need) the attendance of a First Aider or Appointed Person. A list of First Aiders (Appendix A of this policy) is posted in the main School Office and on the notice board in the Staffroom Foyer.

### **Reporting**

The Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995 (RIDDOR) place a legal duty on the school to report work-related deaths, major injuries or over-three-day injuries, work related diseases, and dangerous occurrences (near miss accidents) to the Health and Safety Executive (0845 300 99 23). Accident reports are discussed at the meetings of the school's Risk Management Committee, with discussions aiming to address any matters which might minimise the likelihood of a recurrence of that type of accident.

Any accident involving a pupil that results in an injury must be reported on an SIR (Safety Incident Report) form. The SIR form should be completed at the site of the accident/incident and if the casualty is seen by health centre, the form will be completed recording the treatment and outcome in the girl's medical records. Accidents involving staff must be reported in the same way (SIR form). In addition, any accident which may result in an injury if repeated in the future should also be reported and recorded using SIR forms.

SIR forms are located electronically on the VLE and also in hard copy from the Health Centre, Bursary, Staff Room, Catering Department, Grounds Department, Housekeeping, Science Department, Sports Centre and at St. Margaret's

### **Information to Parents**

Where a girl suffers more than a trivial injury (e.g. a minor cut or bruise), her parents will be informed, usually by the Health Centre, her Housemistress or a senior member of staff. Parents are welcome to contact the Health Centre or House at any time to discuss any concerns about their daughter's health.

### **Pupils with Special Circumstances or Particular Medical Conditions**

Parents of new pupils complete a Health Questionnaire form which they pass to the Health Centre. Information such as asthma, epilepsy, anaphylaxis and diabetes are put into a central database. Data included on the database is that which is required for the staff to ensure the welfare of the girls in their care, both in school and on school trips. Teachers are trained yearly so that are aware of any medical conditions of pupils for whom they are responsible. In addition, they should read the Asthma, Anaphylactic Shock and Diabetes Procedures where arrangements for their care are outlined in more detail. The School Nurse will provide additional training for staff as required, e.g. on the management of diabetes or anaphylaxis. Confidential medical information may be sent to staff as long as the girl's safety is not compromised. Girls with specific medical conditions will have a Care Plan available to staff.

### **First Aid Cover for Staff**

A member of staff who is injured on site should attend the Health Centre. Treatment will be given and, as appropriate, the member of staff will be referred to the Minor Injuries Unit or an ambulance will be called. An SIR will be completed and records kept in the Health Centre.

### **Emergency Use of Oxygen**

Signed agreement with head mistress in place enabling health centre nurses to administer Oxygen in an emergency. Where clinically indicated, all peri-arrest and critically ill students, or those without effective breathing, should be given 100% oxygen (15 l/m using a non re breathing mask with a reservoir bag) whilst awaiting emergency, 999 support (Royal Cornwall Hospitals, NHS Trust Oxygen Policy- Child Health V3.0 June 2020). This should be emergency use only and administered within practitioners' field of competency. Nurses to cover use of Oxygen in yearly BLS training. This is kept

in the clinical room, in the health centre on a hook next to the door. Caution must be taken when using defibrillation in the presence of supplemental oxygen. If supplemental oxygen is being delivered by a face mask, remove the face mask and place it at least one metre away before delivering a shock. Do not allow this to delay shock delivery.

St Mary's has a contract with BOC LIFELINE (annual service contract). BOC Limited supplies the Customer with emergency oxygen equipment pursuant to an agreement incorporating BOC's General Conditions of Supply. After Installation BOC shall perform one Service approximately every twelve (12) months at the school. Each subsequent Service shall be approximately every twelve (12) months thereafter. In the event that an oxygen cylinder is found by BOC during the Service not to be suitable for use BOC shall promptly replace such oxygen cylinder.

Product queries and re ordering (including Oxygen canisters if out of date or less than half full) and questions can be directed to BOC on 0800 111 333, quoting account number 2746614.

## ACCIDENT POLICY FLOWCHART

## Appendix E

# ACCIDENTS - GUIDELINES

The action required will depend on the severity of the Accident. Girls who are First Aiders may be able to help Staff.

**In the event of a serious accident**, in addition to ensuring that a bystander is sent to summon help (Nurse/first aider/ emergency services) it is of key importance for the member of staff who remains with the casualty to:

- Keep calm, assess the situation and take charge.
- Send other girls away from the scene of the accident unless they are able to be of immediate help (younger or very upset girls should be put in the care of an adult if possible).
- Carry out immediate First Aid while waiting for nurse and the Ambulance to arrive.
- Leave the casualty where found, unless it is imperative that she is removed from danger.
- Reassure the casualty and keep her still and warm.

**For an apparently unconscious casualty:**

**D** – Check for, and remove, sources of **Danger**

**R** – Can the casualty **Respond**? Is she conscious? *Hello, can you hear me? Open your eyes.*

If you are alone, and the casualty is unconscious, yell for **help!**

**A** – If unconscious, open her **Airway** by placing one hand on her forehead and gently tilting her head back, using just 2 fingers to lift her chin.

(If you suspect spinal/neck injury, place your hands on either side of her face and gently lift her jaw with your fingertips to open the airway without tilting her neck.)

**B** – Is she **Breathing**? Look, listen and feel for up to 10 seconds.

Send a helper to dial 999 for an ambulance at this point and seek help

**Breathing but Unconscious**, without suspected spinal injury: put her in the recovery position on her side. (For suspected spinal injury, maintain open airway in position found).

**Not Breathing and No Signs of Life: Carry out Cardio Pulmonary Resuscitation (CPR)** as follows:

For a young person or child give 5 initial rescue breaths. Follow these with 30 chest compressions and 2 rescue breaths (once safe to do so as deemed by Resus Council due to covid-19 pandemic), repeating this sequence until help arrives or the casualty's breathing restarts.

For an **Adult**, kneel at the side of the casualty and start 30 chest compressions:

- placing the heel of your hand at the centre of the chest,
- place the other hand on top and interlock your fingers
- Keep arms straight and position yourself vertically above the casualty's chest
- Press down on the breast bone to a depth of 5-6 cms then release all the pressure without losing contact between your hands and the chest
- Open the airway again and give 2 rescue breaths (once safe to do so as deemed by Resus Council due to covid-19 pandemic)
- Return your hands without delay to the centre of the chest and give another 30 chest compressions
- Continue with chest compressions and rescue breaths at a ratio of 30:2

**NB: During covid-19 pandemic give chest compressions and omit rescue breaths.**

**For a badly bleeding casualty: call 999**

- Lie the casualty down, with the injured part raised.
- Start controlling the bleeding using direct pressure over the wound (or beside it, if it contains e.g. glass).
- Apply a large wound dressing (pad and bandage) or an improvised dressing, to control the bleeding.

**For a casualty who is burnt:**

- Cool the burnt area with cold water for at least 10 minutes (nurse will arrive well before this).
- Protect burn blisters – never break them.

**For a casualty who has taken a poison: call 111 (for advice if patient is stable) or 999 in an emergency**

- Quickly try to find out **what** has been taken, **how much** and **when**?
- Put the casualty in the **recovery position**, even if conscious, as unconsciousness and vomiting are very likely. Ensure that the casualty stays in this position until help arrives.
